

Dear Parents,

Kids on Mission have discovered that something your family likely takes for granted — clean, easily available drinking water — is something much harder to obtain in other parts of the world.

You can learn together at home with some simple experiments. Count the times and ways your family uses fresh water in a single day. Ask your child to describe the water supply available to Rebha, a young girl in India, and how it makes her life different from yours. (Find out more at kidsonmission.org.) Estimate the maximum amount of water Rebha might carry from the village pump and attempt to limit your water use to the same amount. How long would it last?

Online, investigate the opportunity to contribute to the One Cup project at onelifekids.org. Consider swapping water for soft drinks at eat-out meals or at-home snack times and donating the funds to the project.

The focus verse presented to Kids on Mission was Proverbs 14:31, which teaches that people honor God by helping people in need. May your family pursue every opportunity you have to honor God through simple acts of service.
