

Tricky math trick

	Rows go side to side			
Columns go up and down	1	2	3	4
	5	6	7	8
	9	10	11	12
	13	14	15	16

1. Circle any number on the grid.
2. Cross out every number in the same row and column you circled.
3. Circle a number that isn't crossed out.
4. Cross out every number in the same row and column as the number you just circled.
5. Repeat Steps 3 and 4 until you have circled four numbers.
Add them up. We know the answer!
